7.1.4

Rain Water Harvesting

7.1.4 Rain water harvesting structures and utilization in the campus

The college is located in rural hilly area which some time experiences droughts as compared to rest of Junnar. We are trying to install Rainwater harvesting system in the college campus but currently we don't have it. But efforts are being made to create awareness among the students and teachers to save water. We adopt good practices through different programs like "Earth is my Duty", "Cleanness day", "Diversity of Junnar" to save water. NSS students and NCC students frequently conduct a rally to create awareness about the save water save life. Trenches have dug around each plant which facilitates easy intake of rainwater. The water which was collected from the roof of the ladies hostel released into the botanical garden in rainy season. This helps in maintaining good botanical garden in college campus. To recharge the bore well, the college made a pit for water near the bore well.
